At this level the driver generates a motion vector which is continuously monitored by a virtual co-pilot. The integration of assistance systems in a safety relevant multi-agent system is presented here to provide first an adequate feedback to the driver to let him recover a dangerous situation. Robust strategies are also presented for the intervention phase once the command vehicle has to be

Adaptive cooperation between driver and assistant system to improve the road safety . The cooperation on the command level can be realized depending on their confidences and the driver's request. Therefore the driver's attention needs to be evaluated continuously to define the confidence value of the driver's command. Unfortunately these two entities may conflict with each other if one
