Finite group actions on acyclic 2 complexes

FINITE GROUP ACTIONS ON ACYCLIC 2-COMPLEXES by Alejandro ADEM Seminaire BOURBAKI 54e annee, 2001-2002, n 894, p. 1 a 17 Novembre 2001 1. A BRIEF HISTORY AND MOTIVATION A simple consequence of the Brouwer fixed point theorem is that any cyclic group acting on a closed disk D^n must have a fixed point. The classical work of P.A. Smith [18] shows that if P is a finite p -group, then any action

Finite group Wikipedia

The symmetric group S_n on a finite set of n symbols is the group whose elements are all the permutations of the n symbols, and whose group operation is the composition of such permutations, which are treated as bijective functions from the set of symbols to itself. Since there are $n!$

Group action mathematics Wikipedia

The abstraction provided by group actions is a powerful one, because it allows geometrical ideas to be applied to more abstract objects. Many objects in mathematics have natural group actions defined on them. In particular, groups can act on other groups, or even on themselves. Because of this generality, the theory of group actions contains wide-reaching theorems, such as the orbit-stabilizer

A note on linearization of actions of finitely semisimple

Let H be a Hopf algebra over a field k and let H act on a commutative local Noetherian k -algebra (A, \mathfrak{m}) . We say that this action is linearizable if there exists a minimal system x_1, \dots, x_n of generators of the maximal ideal \mathfrak{m} such that $h \cdot x_i = \sum_{j=1}^n h(x_j) x_j$ for all $h \in H$ and $i = 1, \dots, n$.
