Forest Stand Dynamics and Modeling Contemporary Topics

Forest Stand Dynamics and Modeling Plants, like all living things, grow and change over time. For forests, the time frames are considerably longer than those for many other plants. This module examines how growth and change takes place in spatially continuous groups of trees called forest stands. It explains how the number and size of trees []

Forest dynamics Wikipedia

Forest dynamics describes the underlying physical and biological forces that shape and change a forest ecosystem. The continuous state of change in forests can be summarized with two basic elements: disturbance and succession. Disturbance. Forest disturbances are events that cause change in the structure and composition of a forest ecosystem, beyond the growth and death of individual organisms
