Math 407 Linear Optimization 1 Introduction

Math 407 Linear Optimization 1 Introduction 1.1 What is optimization? A mathematical optimization problem is one in which some function is either maximized or minimized relative to a given set of alternatives. The function to be minimized or maximized is called the objective function and the set of alternatives is called the feasible region (or constraint region). In this course, the

Centralized and Distributed Newton Methods for Network

Network Optimization and Extensions Dimitri P. Bertsekas Abstract We consider Newton methods for common types of single commodity and multi-commodity network flow problems. Despite the potentially very large dimension of the problem, they can be implemented using the conjugate gradient method and low-dimensional network operations, as shown nearly thirty years ago. We revisit these methods
