SOLVING NONLINEAR TWO POINT BOUNDARY VALUE PROBLEM

2PDAM5) for solving nonlinear two point boundary value problems (BVPs) directly. The two step direct method will be utilised to obtain a series solution of the initial value problems at two steps simultaneously. These methods will solve the nonlinear second order BVPs by shooting technique using constant step size. Three step iterative method is considered as a

Solution of a nonlinear two point boundary value problem

A class of singular second order nonlinear two-point boundary value problems is solved, by introducing a finite element approximation which preserves an assumed monotonicity condition in the discrete equations obtained.

Differential Equations Boundary Value Problems

With boundary value problems we will have a differential equation and we will specify the function and/or derivatives at different points, which we ll call boundary values. For second order differential equations, which will be looking at pretty much exclusively here, any of the following can, and will, be used for boundary conditions.
